Executive Summary

The United States Environmental Protection Agency (U.S. EPA) directed Ecology and Environment, Inc.'s (E & E's) Superfund Technical Assessment and Response Team (START) to perform a Phase I Environmental Site Assessment (Phase I ESA) for the former Louisiana Pacific Corporation (LP) lumber mill in Crescent Mills, California. This assessment is being implemented following a targeted brownfields assessment assistance award to the Sierra Institute for Community and Environment (SICE) for assessment of the former LP lumber mill property. The SICE would like to purchase and redevelop the site for use as a wood chip processing facility. A copy of the SICE application for brownfields assistance is contained in Appendix A.

This assessment was performed in general conformance with the *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, Standard E1527-13*, American Society for Testing and Materials International (ASTM), 2013 (ASTM standard – ASTM International 2013) with the goal to identify recognized environmental conditions (RECs), de minimis conditions, historical RECs, and controlled RECs on the site. The findings of this assessment are as follows:

Recognized Environmental Conditions

Except for the following, no RECs were identified in relation to the site:

- The documented presence of the pentachlorophenol (PCP) in soil near the anti-stain application area indicates a release of the anti-stain agent containing PCP has occurred;
- The presence in 1991 of discolored soil in front of the maintenance shop and at the southeast corner of the boiler building;
- The documented historical practice of disposing of boiler and incinerator ash by spreading on mill roadways and along with wood waste; and
- The presence of stockpiles of wood waste at the site that were moved from the wood waste disposal area.

De Minimis Conditions

Except for the following, no de minimis conditions were identified in relation to the site:

- The observed presence in 1991 of oil-soaked sawdust on the floor of the oil shed, which had a perimeter containment berm and no observed release from the containment;
- The documented presence of petroleum hydrocarbons as motor oil (TPHmo) in 2002 at the discharge point for a trench drain at the maintenance shop; and
- The historical practice of spreading used oil on mill roads for dust suppression.

Historical Recognized Environmental Conditions

This assessment has revealed no historical RECs identified in relation to the site.

Controlled Recognized Environmental Conditions

This assessment has revealed no controlled RECs identified in relation to the site.

Opinion

The documented presence of PCP in soil at concentrations up to 3 milligrams per kilogram (mg/kg), exceeding the U.S. EPA's November 2013 industrial regional screening level (RSL) for PCP of 2.7 mg/kg, indicates that a release of anti-stain agent has occurred. According to a December 2002 Supplemental Site Investigation Report, Crescent Mills Mitigation Site, Former LP Facility, prepared by Geocon Consultants, Inc. (Geocon) - (Geocon 2002b), soil and groundwater samples were collected in 2002 from two borings that reportedly targeted the antistain application area where PCP was previously detected. The closest of the two borings that Geocon sampled in relation to the anti-stain application area is located approximately 75 feet north northeast (up-gradient to cross-gradient) from the anti-stain application area. Due to the upgradient to cross-gradient location and distance from the anti-stain application area, the data collected by Geocon are not reliable for assessing the presence of PCP in the anti-stain application area. The documented release of anti-stain agent is a REC that should be assessed to evaluate the extent and concentrations of contamination in soil that may be encountered during redevelopment.

The documented presence of discolored soil in front of the maintenance shop and at the southeast corner of the boiler building indicates that a release (most likely oil) has occurred at those locations. No information was collected during this assessment to indicate that any cleanup was conducted in the discolored areas. Discolored soil was not observed during the April 10, 2014 site visit. Because extensive surface soil disturbance is common when structures are demolished, the staining is most likely now hidden, but could also have degraded naturally. The past presence of discolored soil is considered a REC that should be assessed to determine the absence or presence of contamination in soil that may be encountered during redevelopment.

The documented practice of disposing of boiler and incinerator ash by spreading on mill roadways and along with wood waste indicates the presence of a release of ash. The presence of boiler and incinerator ash on mill roadways is a REC that should be assessed to determine the absence or presence of contamination.

The presence of stockpiles of wood waste on the site that were moved from the wood waste disposal area indicates the likely presence of incinerator ash and PCP in the stockpiled material. Ash from the boilers and from a teepee burner, located north of the subject site is known to have been disposed along with wood waste. Lumber at the site is known to have been treated with PCP as an anti-stain agent and is contained in wood waste generated by the planer, which is known to have been disposed in the off-site wood waste disposal area then later brought back to subject site and placed in stockpiles. The presence of wood waste in stockpiles that likely contain incinerator and boiler ash as well as PCP is a REC that should be assessed to determine the absence or presence of contamination.

2

As part of a May 1991 *Property Transfer Site Assessment, Louisiana-Pacific Corporation Crescent Mills Facility*, prepared by CH2M Hill (CH2M Hill 1991), oil-soaked sawdust was observed on the floor of the oil shed. The oil shed had a secondary containment berm and no evidence was observed to indicate that oil had been released to the environment. The past presence of oil on the floor of the oil shed is considered a de minimis condition because none of the records reviewed nor any observations made during this assessment suggest that oil reached the environment.

According to the Supplemental Site Investigation Report (Geocon 2002b), TPHmo was detected at a concentration of 550 mg/kg at a depth of 0.15 meter at the discharge point of a trench drain in the maintenance shop. The reported concentration of TPHmo exceeds its December 2013 environmental screening level (ESL) of 500 mg/kg. Even though the presence of TPHmo indicates that a release has occurred, it is considered a de minimis condition because the detected concentration barely exceeds the ESL, contamination was not detectable at the 1 meter sampling depth, and soil contamination has not caused detectable groundwater contamination.

The documented historic practice of spreading used oil on mill roads for dust suppression indicates the presence of used oil on former road surfaces. Most of the site was paved with asphalt when LP expanded the facility in the middle of the 1970s so there has been no need for dust suppression since then. The historical practice of spreading used oil on roadways is known to have been ubiquitous and is not known to have caused significant contamination. Most of the oil used for dust suppression has likely degraded over time; oil is not very mobile in the environment and is restricted to a very thin lens, therefore it is considered a de minimis condition.

The presence of contamination in relation to the boiler water disposal sump, underground storage tanks (USTs), above-ground storage tanks (ASTs), and oil dispenser/transformer storage area was assessed in the Supplemental Site Investigation Report (Geocon 2002b). The documented absence of significant contamination in relation to the boiler water disposal sump, USTs, ASTs, and oil dispenser/transformer storage area indicates that no further assessment should be necessary in these areas.

Data Gaps

The lack of information to confirm the current presence or absence of a fourth UST at the site is considered a significant data gap. The historical presence of a fourth UST at the site is documented in the Property Transfer Site Assessment Report (CH2M Hill 1991), which indicates "A single tank remains onsite near the maintenance shop. This tank was removed from the LP Greenville facility." None of the records reviewed as part of this assessment indicate a fourth UST was registered at the facility, what it contained, its size, or that it was removed. None of the individuals interviewed is aware of any additional information regarding the fourth UST. The brief description of the fourth UST and the fact that it was not identified as a concern in the Property Transfer Site Assessment suggests that the UST may simply have been empty and stored at the surface. The location of the UST near the maintenance shop and the lack of any description of contents or size suggest the UST may have still remained in place during the site visit by CH2M Hill and may remain so today. In the absence of information to confirm the presence or absence of the fourth UST, E & E cannot determine whether it should be considered

3

Executive Summary

a REC. Except for the possible presence of one UST at the site there were no data gaps in this assessment that are considered to be significant. As a result of this data gap, it is possible that additional RECs are present, but cannot be identified.

1 Introduction

The U.S. EPA directed E & E's START to perform a Phase I ESA for the former LP lumber mill, located at 15690 Highway 89, Crescent Mills, California (site). This assessment is being implemented following a brownfields assessment assistance award to the SICE for assessment of the site. The SICE has indicated that it would like to purchase the site for construction of a wood chip processing facility. The site is currently vacant with no structures on the property; however the foundations of former structures are apparent. This report presents findings, conclusions, and opinions for the assessment and is intended for use by U.S. EPA and the SICE. Figure 1 (Appendix B) shows the site location within the city of Crescent Mills. Figure 2 (Appendix B) shows site features and surroundings.

1.1 Purpose

The purpose for performing this Phase I ESA is to identify RECs, de minimis conditions, historical RECs, and controlled RECs, which may represent conditions that need to be addressed to protect workers and the public from exposure to contaminants. In addition, this Phase I ESA was performed to help the user meet the all appropriate inquiry requirement of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) to qualify for landowner liability protections described by CERCLA. The RECs identified during the assessment represent actual and potential environmental liabilities associated with the property. A Phase I ESA has not been previously prepared to evaluate the potential presence of hazardous substances and petroleum.

1.2 Methodology

This Phase I ESA was prepared by U.S. EPA Region 9 START in general conformance with the ASTM standard. The purpose of the ASTM standard is to define good commercial and customary practice in the United States for conducting a Phase I ESA for commercial real estate with respect to the range of contaminants within the scope of the CERCLA and petroleum products. The goal of the ASTM standard is to identify RECs, which the standard defines as follows:

"The term recognized environmental condition means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions."

The voluntary Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions, Standard E2600-10, ASTM, 2010 (ASTM International 2010) describes methodology for assessing vapor intrusion potential as part of a Phase I ESA. The potential for vapor intrusion was considered as part of this assessment, although ASTM Standard E2600-10 was not used.

This Phase I ESA included the following elements:

- Physical reconnaissance of the site and drive-by observation of adjacent properties;
- Review of historical aerial photographs and available maps;
- A radius search of the property and surrounding areas for records of known sites of potential concern listed with federal, state, and local environmental agencies;
- Environmental records review; and
- Interviews with those knowledgeable about the site.

2 Property Description

2.1 Location and Legal Description

The site is located at 15690 Highway 89, Crescent Mills, California. The geographic coordinates for the approximate center of the site are 40° 05' 39.34" North Latitude, 120° 54' 37.23" West Longitude. The site occupies approximately 30 acres of land within assessor's parcel numbers 111-005-065, 111-005-066, and 111-005-067 (subject property). Figure 1 is a site vicinity map showing features and topography of the site and surrounding area. Figure 2 is a site map showing major features of the site. Figures are contained in Appendix B.

2.2 Site and Vicinity General Characteristics

The subject site is occupied by a number of stockpiles of wood waste and one stockpile of soil. Except for the stockpiles, the site is vacant with only paving, floor slabs, and building foundation remnants from the lumber mill. The site and surrounding properties are located near the western margin of the floor of Indian Valley. Ground surface at the site and surrounding properties is flat with a general slope for drainage in a southeasterly direction. The surrounding and nearby properties consist of an adjacent railroad (west) with mixed residential and some commercial properties beyond, a golf course (south), a riparian area (east), and an industrial site that is the former Sacramento Valley Moulding facility (north). An electrical sub-station is located on a small parcel between the site and railroad near the center of the western property boundary.

2.3 Description of Structures and Improvements On-site

There are no structures on the subject site. Concrete floor slabs and foundation remnants from former structures, and asphalt paving in areas adjacent to the former structures are apparent on the ground surface. The site is secured with a perimeter fence.

2.4 Current Uses of the Property

The site is not currently in use.

2.5 Past Uses of the Property

According to the interviews with the applicant and current owner, the subject property was used historically as a lumber mill by LP from the early 1970s until the current owner purchased the property in 1998. The site appears to have been initially developed as a lumber mill in the late 1940s to early 1950s, based on review of historical aerial photographs described in Section 4.2.5 of this report. Before the lumber mill was built, the property was likely used for agriculture, based on review of historical aerial photographs described in Section 4.2.5 of this report.

2.6 Current and Past Uses of Adjoining Properties

Current land uses of adjoining properties are residential, commercial, industrial, and open space as observed during the April 10, 2014 site reconnaissance. Land use north of the site is considered industrial at the former Sacramento Valley Moulding property. Land use west of the

2. Property Description

site is also industrial at the electrical sub-station and railroad properties. Land use south of the site is commercial at a golf course. Land use east of the site is open space in the riparian area along Indian Creek. Past uses of adjoining properties appear to be similar to current uses with a few exceptions based on review of historical aerial photographs described in Section 4.2.5. The current golf course property south of the site appears to have been used for grazing livestock and may have been used as a sand/gravel pit. The subject property also appears to have been used for grazing livestock, based on the presence of fences and a few scattered small structures as observed in historical aerial photographs described in Section 4.2.5.

3 Physical Setting

3.1 Topography and Drainage

According to the *Crescent Mills 7.5-Minute Quadrangle*, prepared by the United States Geological Survey (USGS), 1994 (USGS 1994), the elevation of the ground surface at the subject property is approximately 3,500 feet above sea level. Topography of the subject property is relatively flat. Local topography slopes gently to moderately in an easterly direction west of Highway 89. East of Highway 89, topography is nearly flat on the floor of Indian Valley. Surface drainage in the northern portion of the site flows toward an easterly flowing storm drain located between the former dry kiln buildings and the former planing mill buildings. Surface drainage in the southern portion of the site flows through perimeter ditches into a log deck recycle pond located along the southeastern property boundary. The storm drain and over-flow from the log deck recycle pond flow in an easterly direction toward Indian Creek. Major features and former structures at the site are shown on Figure 3, Appendix B.

3.2 Regional Geology

Information on regional geology and hydrogeology is based on *Geology of the Taylorsville Region, California, Bulletin 353*, prepared by the USGS (USGS Bulletin 353), 1908 (USGS 1908). According to USGS Bulletin 353 (USGS 1908), geologic materials beneath the site consist of Quaternary alluvium on the floor of Indian Valley. The depth to bedrock beneath the site is not known. According to USGS Bulletin 353, (USGS 1908), nearby outcrops of bedrock consist of pre-Devonian metamorphosed rhyolite and Carboniferous metamorphosed andesite.

3.3 Soil Stratigraphy

According to *The EDR Radius Map*TM *Report with Geocheck*®, prepared by Environmental Data Resources, Inc. (EDR), March 27, 2014 (EDR Radius Report – EDR 2014), soils beneath the site are mapped as Plumas variant, which are deep and moderately deep, moderately well and well drained soils with moderately coarse textures. Soils beneath the site are characterized in the EDR Radius Report as having moderate infiltration rates. According to a November 20, 1992 *Assessment of Soil and Groundwater Contamination, Sacramento Valley Moulding Facility*, prepared by Resna (Resna 1992), native soil below the adjacent Sacramento Valley Moulding site consists of mixtures of sand and silt with gravel down to the total explored depth of approximately 20 feet below ground surface (bgs). Because the subject site and the Sacramento Valley Moulding site are located in the same geologic environment and at a similar elevation, soil below the subject site is anticipated to be similar to that at the Sacramento Valley Moulding site.

3.4 Hydrogeology

According to the EDR Radius Report, no information is available regarding depth to groundwater and flow direction for the site. According to the assessment report for the Sacramento Valley Moulding site (Resna 1992), groundwater was encountered at that site at depths ranging from 7 to 9 feet bgs during a groundwater sampling event performed in

3-1

3. Physical Setting

November 1992. Groundwater gradient was calculated to flow in a southeasterly direction, based on water levels measured in monitoring wells during the November 1992 sampling event. The measured groundwater flow direction is the same as would be expected based on surface topography. Resna did not calculate the magnitude of the groundwater gradient at the Sacramento Valley Moulding site. Because the subject site and the Sacramento Valley Moulding site are located in the same geologic environment and at a similar elevation, depth to groundwater and groundwater flow direction below the subject site is anticipated to be similar to that at the Sacramento Valley Moulding site.

4 Records Review

4.1 Standard Environmental Record Sources

E & E subcontracted EDR to search reasonably ascertainable government records for information regarding properties with known environmental concerns located within the search radius prescribed by the ASTM standard specific to each database. Database search information is incorporated into the appropriate sections of this report.

The database search report consists of information from the recommended sources listed in the ASTM guidelines. A summary of the database research results is provided as part of the EDR Radius Report (EDR 2014) to show sites identified within various radii away from the subject property. A copy of the EDR Radius Report is contained in Appendix C.

4.1.1 On-site Search Results

Search results in the EDR Radius Report indicate that the former LP lumber mill is listed in some of the databases searched. The subject site was listed in the California Department of Toxic Substances Control (DTSC) Envirostor (ENVIROSTOR), facility and manifest data (HAZNET), California Solid Waste Information System (SWF/LF), historical underground storage tank (HIST UST), Statewide Environmental Evaluation and Planning System underground storage tank (SWEEPS UST), and California emissions inventory (CA EMI) databases.

The subject site is listed in the ENVIROSTOR database in relation to a preliminary assessment performed by the DTSC in 1990. The subject site is listed in the SWF/LF database in relation to the large stockpiles of wood waste that remain at the site. The subject site is listed in the HIST UST and SWEEPS UST databases in relation to three USTs that were operated under permit at the site by LP. The subject site is listed in the HAZNET database in relation to the off-site disposal of 333.75 tons of contaminated soil under a hazardous waste generator identification number. The subject site is listed in the CA EMI database for emissions in 1987 only, though quantities of compounds emitted are not listed.

4.1.2 Off-site Search Results

A number of sites are listed in the EDR Radius Report. Only those sites that are located adjacent, up-slope, or potentially up-slope from the subject property such that they could be hydraulically up-gradient are discussed here. Sites located at a lower elevation or that do not have potential to be hydraulically up-gradient from the subject property are not likely to have caused contamination at the subject property and are not discussed here. The locations of the sites listed below are mapped in the EDR Radius Report contained in Appendix C.

The closest site to the subject site that was identified in the database search is the Sacramento Valley Moulding site, which is located adjacent to the subject property in a northerly direction at 1 Mill Road. The Sacramento Valley Moulding site was identified in the EDR Radius Report as a former leaking UST site where cleanup was completed and the case file closed. The Sacramento

Valley Moulding site is the only site other than the former LP lumber mill listed in the EDR Radius Report except for the orphaned sites discussed below.

Five orphaned listings in Crescent Mills were identified in the database search. Orphaned sites are those for which EDR does not have sufficient location information to plot on the map. Some database listings for the subject site and the Sacramento Valley Moulding site are included in the orphaned sites listing, however all database information for both of these sites was included in the discussion in the paragraphs above. On-line sources such as Google Earth, Google Maps, Mapquest, and Google searches were used to determine whether the orphaned sites were near enough to the subject property to be of concern.

Except for the listings for Daniel Steele and Service Station, the orphaned sites were located. The Daniel Steele and Service Station sites are both listed on the SWEEPS UST database with addresses along Highway 89. The orphaned site listings for Crescent Mills Chevron and Crescent Tow are for the same property, located approximately 400 feet west northwest of the site at 15803 Highway 89. The Crescent Mills Chevron/ Crescent Tow site is listed on the SWEEPS UST and HAZNET databases. The fifth orphaned site database listing is for a historical UST at the Sorsol Water Company, which is located approximately ½ mile northwest of the site. Additional records for the Daniel Steele and Crescent Mills Chevron/Crescent Tow site were reviewed at the Plumas County Department of Environmental Health (PCDEH) as discussed in Section 4.2.1. All of these orphaned sites are unlikely to represent a REC with respect to the subject property.

4.2 Additional Records Sources

Additional sources of environmental records may include title searches; fire, planning, and building department records; local agency records; local land records; and historical telephone directory listings. According to the ASTM standard, "the purpose of records review is to obtain and review records that will help identify recognized environmental conditions in connection with the property". Except as noted here, additional records sources were not searched because they were not likely to provide information that would have identified RECs, considering what is already known about the site. Additional records sources besides those provided by EDR as part of the radius report include local agency records reviewed at the PCDEH, the DTSCs Envirostor website (http://www.envirostor.dtsc.ca.gov/public), the State Water Resources Control Boards (SWRCB) Geotracker website (http://geotracker.waterboards.ca.gov), the Plumas County Historical Society, and the Plumas County Building Department. As part of the records search provided by EDR, the following additional records were reviewed:

- Historical topographic maps (Appendix D);
- Historical telephone directory listings (Appendix E);
- Sanborn fire insurance maps (Appendix F);
- Historical aerial photographs (Appendix G);
- Historical site photographs (Appendix H); and
- A search for environmental liens (Appendix I).

4.2.1 Local Agency Records

E & E START reviewed records at the PCDEH to obtain data regarding the past remediation and assessments performed in relation to the subject site and for the Sacramento Valley Moulding, Crescent Mills Chevron/ Crescent Tow, and Daniel Steele listings in the EDR Radius Report (EDR 2014). While records review requests were also submitted to the local Regional Water Quality Control Board (RWQCB) office and the DTSC, no records were available for the sites of interest from those agencies. E & E START also reviewed online records maintained by the SWRCB and DTSC on their Geotracker and Envirostor websites for certain off-site properties identified in the EDR Radius Report to help assess whether they pose significant potential to have caused contamination at the subject site. The only information available on the Geotracker and Envirostor websites was general in nature and duplicative of information already contained in the EDR Radius Report. E & E START submitted a file review request to the California Department of Transportation (Caltrans) for documents relating to a wetlands restoration project on its property adjacent to the eastern property boundary of the site, where the former LP wood waste disposal area was located. The documents obtained through records review at the PCDEH and Caltrans are described in the sections below.

4.2.1.1 Former LP Lumber Mill

Building Department Records

Building permits were issued to LP in the late 1970s by the Plumas County Building Department for construction of a new planing mill, a saw mill, dry kilns, cooling sheds, a fuel storage building, water wells, and a septic system. Some of the permits also included sketches showing the locations of water wells, the septic system, some of the existing structures at that time, and the locations of the new structures. Figure 3 (Appendix B) shows the locations of former structures and features of the site as observed during the April 10, 2014 site visit. Copies of the permit documents obtained from the Plumas County Building Department are contained in Appendix J.

1990 Preliminary Assessment/Site Inspection

In 1990, the DTSC performed a preliminary assessment of the former LP Lumber Mill, as described in its December 14, 1990 *Preliminary Assessment/Site Inspection Summary* (DTSC 1990). The preliminary assessment was performed because the site was identified by DTSC as a potential hazardous waste site, based on the type and size of the facility and the potential for wood treatment chemical contamination. The DTSC concluded in its report that there were unpermitted ash and wood waste landfill areas at the site that may be of concern to the PCDEH, RWQCB, California Integrated Waste Management Board, and prospective buyers. The DTSC indicated that no further action was recommended because no evidence was found of a hazardous materials problem or of chemical contamination at the site.

1991 Property Transfer Site Assessment

A second historical environmental assessment is described in the Property Transfer Site Assessment Report (CH2M Hill 1991). The 1991 assessment was performed to determine whether readily available information indicated that on-site activities had resulted in the release of hazardous materials onto the subject property. As part of the 1991 assessment, CH2M Hill

visited the site, interviewed individuals and agencies with knowledge of the site, and reviewed available records in regards to the past use and potential release of hazardous materials at the site. CH2M Hill interviewed LP staff and staff at the California Department of Health Services, PCDEH, RWQCB, and the Plumas County Planning Department. CH2M Hill reviewed available records pertaining to the past use and potential releases of hazardous materials on the site as obtained from the PCDEH, RWQCB, Plumas County assessor's office, and LP.

CH2M Hill identified a number of former site activities and made observations pertaining to those activities. CH2M Hill summarized potential concerns at the site into one of the following categories: ASTs, USTs, wood waste disposal area, saw mill, new planer building, oil shed, boiler building, maintenance shop, log deck, and recycle pond. At the saw mill, CH2M Hill noted that an anti-staining agent, containing PCP, was sprayed on lumber from 1974 to 1979 between the saw mill and the lumber sorter and stacker. Two soil samples were collected by LP in December 1988 from the vicinity of the anti-stain application area from a depth of 10 to 12 inches bgs. CH2M Hill did not indicate specific sample locations in their report, but the general area where the samples were collected. Results of the analysis of soil samples revealed the presence of PCP at concentrations of 2 and 5 mg/kg and tetrachlorophenol (TCP) at concentrations of 1 and 3 mg/kg. The highest reported PCP concentration at the site exceeds the U.S. EPA's November 2013 industrial RSL for PCP of 2.7 mg/kg. The reported concentrations of TCP are below the December 2013 industrial ESL established by the San Francisco Bay RWQCB for TCP of 18,000 mg/kg.

At the new planer building, CH2M Hill noted the presence of discolored soil outside the building in an area used for dispensing oil, however, they did not provide any related recommendations. At the oil shed, CH2M Hill noted that it was used to store oil and lubricants and that it was an enclosed and bermed structure. During its site visit CH2M Hill noted oil-soaked sawdust on the floor of the oil shed, but did not indicate that a release was observed. At the boiler building, CH2M Hill noted several sacks and containers of boiler chemicals inside, the presence of empty condensate tanks at the north end and east side of the building, and discolored soil at the southeast corner of the building. At the maintenance shop, CH2M Hill noted an area of discolored soil in front of the building but observed no drains or cracks in the concrete floor below the maintenance area. At the log deck, CH2M Hill noted that a water spray system had been used to prevent cracking of logs during storage, biocides were not used to treat the water, and the log deck was graded to promote runoff to the recycle pond. At the recycle pond, CH2M Hill noted that there was no water in the pond during its site visit, but that the bed of the pond was dark in color. In regards to ASTs at the site, CH2M Hill noted a water storage tank and AST with some discolored soil below it at a location that is beyond the eastern site boundary in the southern half. The only other AST described was used to collect used oil and was located at the north end of the maintenance shop building, but it had a secondary containment and did not appear to have leaked. The ASTs shown on Figure 3 near the western site boundary were shown on the figure prepared by CH2M Hill, however, no discussion of these ASTs was provided in their report. In the wood waste disposal area (beyond the eastern site boundary), CH2M Hill noted that ash from the boiler was routinely deposited in an ash disposal area and that ash from the teepee burner may have been disposed in the wood waste disposal area. CH2M Hill also indicated that ash had been spread on roadways, although none was observed during their site

4-4

visit. During its February 21, 1991 site visit, CH2M Hill observed an area of oil staining with petroleum odor in the wood waste disposal area near the ash disposal area.

In the 1991 assessment report, CH2M Hill identified the past presence of USTs and provided the recommendations described below. Two 6,000-gallon diesel and one 10,000-gallon leaded gasoline USTs had been operated by permit at the site. The impact of three former USTs on soil and groundwater beneath the site is unknown. The USTs were removed by LP in 1987. No soil or groundwater samples were collected when the USTs were removed. CH2M Hill indicated that a fourth tank remained at the site near the maintenance shop and that it had been previously removed from an LP facility in Greenville, California. CH2M Hill did not indicate the fourth UST to be of concern and provided no recommendations in its regard. CH2M Hill recommended sampling soil underlying the former USTs and sampling soil and groundwater in an area of stained pavement it noted around the former USTs.

Possible sump locations were inferred to be present by CH2M Hill from an LP memo dated 1985 that indicated a gravel-lined pit used for disposal of cooling water and boiler blow-down water was replaced with a perforated drum. The 1985 memo indicated that concentrations of the sulfite and aliphatic amines used to treat the water were below hazardous or designated waste levels. CH2M Hill recommended that the area of the discharges should be located and soil sampled, however they were unable to locate the sumps.

During their February 21, 1991 site visit, CH2M Hill identified tires, metal, and other debris along the northern property line and containers of chemicals such as boiler chemicals, paint, oil, and grease at the site. CH2M Hill recommended that the debris be removed and the containers of chemicals either taken to another LP facility for use or disposed of properly. Neither significant quantities of debris nor any containers of chemicals were observed by E & E during the April 10, 2014 site visit.

2002 Supplemental Site Investigation

According to the Supplemental Site Investigation Report (Geocon 2002b), Geocon performed soil and groundwater sampling at the subject site on behalf of Caltrans. Caltrans requested the sampling when it considered purchasing the former LP lumber mill as part of a planned wetland restoration project that was later performed in the former LP wood waste disposal area adjacent to the eastern property boundary. As part of its assessment, Geocon collected a total of 19 soil and 6 groundwater samples from 13 boring locations. Samples were collected at depths ranging from the ground surface to 3 meters. Boring locations were selected to target the following areas of concern: former UST location, sawmill/lumber sorter/anti-stain area, dry kiln/boiler blowdown sump, transformer/oil dispensing unit, wood waste disposal area, maintenance shop trench drain outfall, dry kiln fuel shed drain outfall, and dry kiln/possible fueling area. Soil and groundwater samples were analyzed for one or more of the following: total petroleum hydrocarbons as gasoline, diesel, and motor oil; volatile organic compounds; phenols; and heavy metals. Laboratory analytical results for detected compounds were compared to the December 2013 ESLs published by the San Francisco Bay RWQCB for industrial and commercial properties where groundwater is present at depths less than 3 meters and it has potential beneficial use as drinking water. Of the detected compounds, only TPHmo was present at a concentration exceeding its ESL. TPHmo was detected only in the soil sample collected at boring

HA3 (at the trench drain outfall from the maintenance shop) from a depth of 0.15 meter bgs at a concentration of 550 mg/kg. The reported concentration of TPHmo slightly exceeds its ESL of 500 mg/kg. Neither the soil sample collected from this boring at a depth of 1 meter nor the groundwater sample from the same boring contained detectable concentrations of TPHmo. Geocon concluded in its report that it did not appear that additional assessment was warranted. Data tables and a sample location map summarizing the 2002 supplemental site investigation are contained in Appendix K.

4.2.1.2 Former LP Wood Waste Disposal Area

According to a June 2002 Site Investigation Report for Crescent Mills Mitigation Site, prepared by Geocon (Geocon 2002a), Geocon performed soil, surface water, and groundwater sampling in the former wood waste disposal area east of the former Sacramento Valley Moulding facility on behalf of Caltrans. Caltrans requested the sampling before it purchased that portion of the former LP wood waste disposal area as part of a planned wetland restoration project. As part of its assessment, Geocon collected a total of 12 soil, one surface water, and five groundwater samples from five boring locations, two exploratory trenches, and one surface water sample location. Samples were collected at depths ranging from 0.15 meters to 1.5 meters bgs. Boring and exploratory trench locations were selected to target an area of observed sawdust fill and surface debris. Soil and water samples were analyzed for one or more of the following: total petroleum hydrocarbons as gasoline, diesel, and motor oil; volatile organic compounds; phenols; and heavy metals. Geocon concluded in its report that based on the absence of contaminants of concern, additional site investigation did not appear to be warranted.

According to an October 13, 2011 *Debris Removal Summary Report*, prepared by Geocon (Geocon 2011), Geocon performed a survey for buried metallic objects in an area of wood waste fill and debris east of the former Sacramento Valley Moulding facility. As a result of the magnetic survey, Geocon conducted five excavations and removed debris from two of those excavations for disposal. Debris encountered included crushed 55-gallon drums with residual black tar and various types of metallic debris. Soil samples were collected for laboratory analysis from the bottoms of the two excavations where 55-gallon drum debris was encountered. The two soil samples were analyzed for petroleum hydrocarbons, PCP, polychlorinated biphenyls (PCBs), and metals. None of the tested constituents is reported to have been detected at concentrations of concern.

4.2.1.3 Sacramento Valley Moulding – 1 Mill Road

According to the Assessment of Soil and Groundwater Contamination (Resna 1992), two 350-gallon diesel and gasoline USTs were removed in October 1992. The USTs were located approximately 250 feet northeast of the northeast corner of the subject property. Approximately 60 cubic yards of contaminated soil was excavated and aerated. Four groundwater monitoring wells were constructed around the former USTs, however they were constructed at least 75 feet from the former USTs. Groundwater contamination was not detected in samples collected from any of the monitoring wells. Groundwater gradient was calculated to flow in a southeasterly direction with static water levels measured at approximately 7 to 9 feet bgs. Based on results of groundwater monitoring, the RWQCB determined that no further action is necessary in relation to the USTs in a letter dated May 11, 1994. While potential remains for groundwater contamination to be present within 75 feet of the former USTs (as a result of the distal placement

of monitoring wells), groundwater analytical results indicate that contamination has not migrated in the direction of the subject site. If contamination remains within 75 feet of the former USTs, it is unlikely to migrate toward the subject site due to the southeasterly groundwater flow direction. Contamination from former USTs at the Sacramento Valley Moulding property is not considered a REC with respect to the subject site.

4.2.1.4 Crescent Mills Chevron/Crescent Tow - 15803 Highway 89

Records were identified at the PCDEH for this address as Crescent Mills Chevron and as Crescent Tow. According to PCDEH records, one 2,000-gallon, one 1,000-gallon, and one 550-gallon gasoline USTs were removed in December 1992. The USTs had passed pressure testing in November 1990. The PCDEH did not require further action in relation to the USTs after review of confirmation soil sample results that revealed the presence of low concentrations of petroleum constituents.

On March 14, 1994, approximately 45 gallons of gasoline was released from an AST at the Crescent Tow site. Gasoline flowed mostly over pavement, but ultimately migrated 500 feet in the western drainage ditch along Highway 89. According to a March 14, 1994 letter report for the incident from the PCDEH, most of the fuel remained on asphalt paved surfaces. Approximately 10 cubic yards of contaminated soil was excavated from the roadside ditch. Field notes taken by the PCDEH indicate that no further excavation was required. No regulatory case file was opened in relation to the spill. While residual fuel from the spill may remain in the ditch or below cracks in pavement along the flow path of the spill, it is unlikely to have caused contamination at the subject site. The Crescent Mills Chevron/Crescent Tow site is located approximately 400 feet northwest of the subject site in the up-gradient direction. The limited remaining residual soil contamination is unlikely to have caused groundwater contamination in the vicinity of the releases and even less likely to have caused contamination at the subject property. Releases at the Crescent Mills Chevron/Crescent Tow site are not considered RECs with respect to the subject site.

4.2.1.5 Daniel Steele - Highway 89

According to PCDEH inspector's field reports for UST closure, on March 27, 1990 a 2,000-gallon UST was closed in place after all contaminated or suspected contaminated soil was removed from the UST excavation. The soil was aerated at the site of the UST closure. No regulatory case file was opened and no further action was required in relation to the UST. Even though the location of this site is not known, the removal of obviously contaminated soil before closure suggests the likelihood for significant residual contamination is low. This site is not considered to be a REC with respect the subject site.

4.2.2 Historical Topographic Maps

Historical topographic maps published by the USGS were provided as part of the EDR radius search. Maps reviewed include the 1893 Honey Lake Quadrangle of the 60 minute series, 1907 Indian Valley Quadrangle of the 15 minute series, 1950 Greenville Quadrangle of the 15 minute series, and the 1980 and 1994 Crescent Mills Quadrangles of the 7.5 minute series. Review of historical topographic maps revealed the presence of sparse development in the vicinity of the site before 1950. The 1950 map shows the subject site and the adjacent Sacramento Valley Moulding site undeveloped. The 1980 map shows many of the structures at the site except those

constructed by LP in the late 1980s. The 1994 map shows the structures at the site and the Sacramento Valley Moulding site much as they would have appeared before the structures on the subject site were demolished. Historical topographic maps are contained in Appendix D.

4.2.3 Historical Telephone Directories

As part of the database and records search performed by EDR, results of a search of historical telephone directory listings were provided in the EDR City Directory Abstract. Review of the EDR City Directory Abstract revealed directory listings for a backhoe service, located approximately 2,000 feet north of the site and Neff Automotive, located approximately 250 feet west of the site. The Neff Automotive listing only appears in the 2013 directory listing results. The EDR City Directory Abstract did not reveal the presence of businesses near the site that are likely to represent a REC with respect to the subject site. The EDR City Directory Abstract is contained in Appendix E.

4.2.4 Sanborn Fire Insurance Maps

As part of the database and records search performed by EDR, results of a search for available historical Sanborn fire insurance maps were provided in the EDR Certified Sanborn Map Report. Results of the search indicate that there is no coverage by Sanborn fire insurance maps for the area of concern or surrounding sites. The EDR Certified Sanborn Map Report is contained in Appendix F.

4.2.5 Historical Aerial Photographs

As part of the database and records search performed by EDR, historical aerial photographs were provided in the EDR Aerial Photo Decade Package. Photographs were available for the years 1946, 1953, 1962, 1973, 1981, 1993, 1998, 2005, 2009, 2010, and 2012. In the 1946 aerial photograph, the subject site appears sparsely developed with a few scattered small structures, consistent with agricultural land use. A group of small structures beyond the northern site boundary is adjacent to the railroad and could be associated with the railroad or agricultural land use. Most of the town of Crescent Mills is developed with obvious streets and a variety of different sized structures that is consistent with mixed residential and commercial land use. The railroad and Highway 89 are visible in their approximate current alignments and locations. An area devoid of vegetation with what appear to be vehicle paths is visible in the 1946 photograph in the vicinity of what would later be the fire well/water storage tank (Figure 3, Appendix B). The area devoid of vegetation was most likely associated with agriculture or a small gravel pit.

The 1953 photograph is out of focus, but it shows development had begun at the subject site. The 1962 photograph shows the subject site fully developed as a lumber mill. The facility roughly covers the northern half of the subject property as well as the Sacramento Valley Moulding property. It appears that the planer and sawmill buildings are located on the Sacramento Valley Moulding property with dry kilns and lumber storage on the subject property. The 1973 photograph is out of focus, but appears to show the site in the process of redevelopment. The 1981 photograph is also out of focus, but it appears to show most of the structures indicated on Figure 3 (Appendix B) after LP constructed a number of new buildings in the late 1970s on the subject parcels and separately from the Sacramento Valley Moulding site. The 1993 photograph shows the site cleared of most structures. It also appears that wood waste and/or soil from the southern half of the wood waste disposal area was partially moved to the southern end of the site.

4-8

The wood waste and soil (based on field observations of these materials by E & E during the April 10, 2014 site visit) are apparent on the photograph as stockpiles in the log storage area. In the 1998 and 2005 photographs, all of the structures have been demolished and additional material appears to have been moved from the northern portion of the wood waste disposal area to stockpiles on the subject site. After 2005, the only obvious change is that a stockpile of sawdust near the electrical substation appears smaller over time. As discussed in Section 5 of this report, Mr. McKee and Mr. Lehman indicated that sawdust was taken from the site for re-use. Copies of the historical aerial photographs reviewed as part of this assessment are contained in Appendix G.

4.2.6 Historical Site Photographs

Historical site photographs were obtained from the Plumas County Historical Society. Historical black and white site photographs show portions of the former LP lumber mill when it was active, construction of the new dry kilns, and a view of the new planing mill. The dates of the black and white photographs are unknown. Two additional color photographs were taken in 1988 after the mill had closed, but before the structures were demolished. Copies of the historical site photographs reviewed as part of this assessment are contained in Appendix H.

4.2.7 Land Title Records

In general conformance with the ASTM standard, E & E reviewed land title records for the subject parcels by obtaining an environmental lien search as part of the EDR radius report. The EDR lien search report did not indicate any environmental liens against the subject property. Chains of title were not obtained for review because they were not likely to identify RECs considering what is already known about land use at the subject property. The EDR lien search report is contained in Appendix I.

5 Site Reconnaissance and Interviews

5.1 Site Reconnaissance

E & E conducted a reconnaissance of the site on April 10, 2014. Mr. Mik McKee of the SICE was available during the site visit to answer questions and to provide site access. The site was observed visually for evidence of obvious contamination or the presence of RECs. Select photographs from the reconnaissance are contained in Appendix L.

5.1.1 Observations on the Property

Observations of the site did not reveal the presence of any areas of obvious soil staining or stressed vegetation. No illegal dumping areas, pits, or significant piles of debris/garbage were observed. In general, good housekeeping practices were apparent at the site with only a few scattered areas of steel and concrete debris from demolition of the former structures. Dark coloration was observed on the ground surface in the vicinity of a large sawdust stockpile, though it appeared to be the result of natural sawdust decomposition. Concrete slabs and building foundations were obvious during the site visit, although none of the structures remain.

The presence of imported fill was obvious as a two to three feet tall bank beyond the eastern site boundary. This fill was most likely placed during initial site development or in the late 1970s when LP expanded the facility. A number of large stockpiles, consisting of soil, bark, and/or sawdust, were observed at the site. Approximately the southern quarter of the site is covered by a large soil stockpile ranging from about 4 to 8 feet tall. Wood waste stockpiles 1, 2, and 4 (Figure 3, Appendix B) appear to consist of mixed bark and soil while stockpiles 3 and 5 consist of sawdust. According to Mr. McKee, sawdust in stockpile 3 was taken from stockpile 5 and moved closer to the entrance for ease of loading for off-site re-use. Wood waste stockpiles 1 through 3 are approximately 6 to 8 feet tall, stockpile 4 is approximately 10 feet tall, and stockpile 5 is approximately 25 to 30 feet tall.

A rectangular pond was observed in the southern portion of the property. The pond contained water a few feet deep. A ditch surrounding the southern quarter of the site drains into the pond. According to the Property Transfer Site Assessment Report (CH2M Hill 1991), the pond and ditch system was used to collect water for re-use that was sprayed onto logs in the log storage area. Water was sprayed on logs to prevent cracking. Chemicals were not used to treat the water. During the April 10 site visit, water in the pond and where standing in the ditch system exhibited a brown color. The brown color of the water is likely from the presence of tannins, lignins, and other natural by-products of the decomposition of plant materials. Tannins and lignins are not CERCLA-regulated compounds or petroleum so evaluation of the presence of these compounds is outside the scope of this assessment.

A small concrete slab was observed at the north end of the pond with 10 to 12-inch diameter steel piping. The small slab with large diameter piping is at the location indicated in the Property Transfer Site Assessment Report (CH2M Hill 1991) as the log deck supply well and pump house.

5. Site Reconnaissance and Interviews

One pipe had been cut off at the surface of the slab and appeared to have been plugged. The plugged pipe had water slowly flowing from it, suggesting that it is either still connected to piping underground with water in it at a higher elevation or it is the casing for the supply well, which is exhibiting weak artesian flow.

5.1.2 Observations Within and Adjacent to the Structures

No structures are present on the subject site.

5.1.3 Indications of Polychlorinated Biphenyls

Di-electric oil within electrical transformers may contain PCBs, particularly if they were installed before the use of PCBs was banned in 1977. While electrical transformers certainly were present at the site, none were observed during the April 10, 2014 site visit. A few shallow concrete vaults were observed at some of the building foundations where electrical conduit was also observed. Although it is likely that some or all of the shallow vaults with electrical conduit contained transformers in the past, none of them exhibited oil staining that would suggest that a release had occurred.

5.1.4 Observations at Adjacent Properties

During the April 10, 2014 site visit, conditions at adjacent properties were observed. Along the western central portion of the site boundary, an electrical substation is surrounded on three sides by the subject site. The electrical substation contained a number of electrical transformers. None of the transformers at the substation showed any indication that a leak had occurred. The substation is constructed with a sump at its northernmost corner to collect spills or storm water runoff from the substation. The sump did not exhibit oil staining that would suggest a leak had occurred. Except for the area of the electrical substation, an active railroad borders the western property boundary. Beyond the railroad are mostly residential structures with a few commercial structures along Highway 89.

The adjacent property beyond the northern site boundary is the Sacramento Valley Moulding site which appeared to be in use on the day of the site visit, however its specific use could not be readily determined. The adjacent property beyond the southern site boundary is an active golf course.

Adjacent property beyond the eastern site boundary is an undeveloped riparian area along Indian Creek, which is the former LP Lumber Mill wood waste disposal area. Based on review of historical aerial photographs described in Section 4.2.5, it appears that some or all of the wood waste was brought back to the site. According to Mr. McKee, Caltrans owns the property where the former wood waste disposal area is located and has in recent years completed a wetland restoration project on that property. As observed during the April 10, 2014 site visit, the former wood waste disposal area appears as a typical riparian area with no obvious signs of development.

5.2 Interviews

E & E interviewed the following individuals as part of this assessment:

Mr. Mik McKee, SICE;

- Mr. Greg Lehman, current site owner; and
- Mr. Richard McCutcheon, former LP employee.

E & E requested that Mr. McKee complete the ASTM E1528-06 transaction screen questionnaire as part of the interview process. The completed questionnaires used as part of the interview process are contained in Appendix M.

5.2.1 User-provided Information

As required by the ASTM standard, the user is asked for the user-provided information, by completing the user questionnaire. Specific questions in each of the following six categories of information are included in the questionnaire:

- Environmental cleanup liens that are filed or recorded against the subject property;
- Activity and land use limitations that are in place on the subject property or that have been filed or recorded in a registry;
- Specialized knowledge or experience of the person seeking to qualify for the landowner liability protection provided by CERCLA;
- Relationship of the purchase price to the fair market value of the subject properties if they were not contaminated;
- Commonly known or reasonably ascertainable information about the subject property; and
- The degree of obviousness of the presence or likely presence of contamination at the subject property, and the ability to detect the contamination by appropriate investigation.

The user questionnaire was completed by Mr. McKee. Information provided in the user questionnaire establishes what a prospective purchaser knew about a property before a real estate transaction, primarily to help qualify for the landowner liability protections provided by CERCLA.

Mr. McKee indicated on the user questionnaire that he was not aware of any environmental cleanup liens or activity and land use limitations on the property and has no specialized knowledge or expertise related to the property. Mr. McKee indicated that the proposed purchase price reflects the fair market value for the property. Mr. McKee indicated that he knows of the past use of the property as a lumber mill, knows of specific chemicals that are or once were present at the property, and knows of environmental cleanup that has taken place at the property (including removal of USTs in 1987), but is not aware of spills or releases at the property. Mr. McKee indicated that the only obvious indicator for the presence or likely presence of contamination he is aware of is that an UST may remain at the site. A copy of the completed user questionnaire is contained in Appendix M.

5.2.2 Findings of Transaction Screen Questionnaire

As part of the interview process, Mr. McKee and Mr. Lehman completed the ASTM E-1528-06 transaction screen questionnaire. Mr. McKee indicated on the questionnaire that he is aware that the site and surrounding properties were formerly used as a lumber mill, that USTs were removed at the site in 1987, that one UST may remain at the site, and that contamination may remain associated with the USTs. Mr. McKee also indicated he is aware of fill dirt on the site that is from an unknown location. Mr. Lehman indicated that he had owned the property since 1999 and that he is aware that the site and adjacent properties have been used for industrial land uses. Mr. Lehman indicated that he is not aware of any fuel storage tanks at the site, releases or dumping of hazardous materials, wastes, fill, treatment/disposal pits, and violations of environmental laws.

5.2.3 Interviews

A personal interview was conducted with Mr. McKee during the site reconnaissance and by telephone with Mr. McCutcheon and Mr. Lehman. As part of the interview process, Mr. Lehman also completed the ASTM E1528-06 transaction screen questionnaire. The information provided on the ASTM E1528-06 transaction screen questionnaire by Mr. McKee and Mr. Lehman is discussed above in Section 5.2.2. Information gathered during personal interviews that is duplicative of other information in this report is not discussed here.

Mr. McKee was not aware of where or what specific activities had taken place at the former lumber mill.

Mr. McCutcheon indicated that a boiler at the site used wood waste as fuel, but that the facility did not burn wood waste to generate power. Mr. McCutcheon recalled that lumber was treated at the site by spraying with a clear liquid, but that lumber had only been treated during the Vietnam War.

Mr. Lehman indicated that the wood waste stockpiles at the site were present when he bought the property. Mr. Lehman recalled that LP had indicated to him that a full environmental cleanup was conducted before he bought the property. However, Mr. Lehman did not recall having seen and does not have any copies of reports documenting the cleanup activities conducted by LP. Mr. Lehman indicated that Caltrans had placed the soil stockpile at the south end of the property during his ownership. The soil stockpile was generated as part of its wetlands restoration project on the adjacent property east of the site in the former LP wood waste disposal area. According to Mr. Lehman, the soil was sampled by Caltrans to ensure that it was clean before it was placed at the site. Mr. Lehman indicated that he does not have copies of any reports documenting the sampling or wetlands restoration work conducted by Caltrans.

6 Findings

The DTSC concluded in its Preliminary Assessment/Site Inspection Summary Report (DTSC 1990) that there were unpermitted ash and wood waste landfill areas at the site (referring to the wood waste disposal area) that may be of concern to the PCDEH, RWQCB, the California Integrated Waste Management Board, and prospective buyers. The DTSC indicated that no further action was recommended because no evidence was found of a hazardous materials problem or of chemical contamination at the site.

The second previous assessment performed at the site is the property transfer site assessment (CH2M Hill 1991). CH2M Hill provided recommendations in relation to observed solid waste along the northern site boundary and re-use or disposal of unused chemicals. Because the property evaluated by CH2M Hill included the adjacent off-site property containing the wood waste disposal area, some of their recommendations pertain to concerns at the adjacent property. Neither significant debris nor containers of unused chemicals were observed during the April 10, 2014 site visit, so these issues and issues pertaining to the wood waste disposal area are not described below. The potential presence of tannins and lignins was also identified in the property transfer site assessment as a potential concern; however such compounds are naturally occurring and outside the scope of CERCLA and petroleum products, thus were not considered in this assessment. The property transfer site assessment report contained the following recommendations pertaining to the subject parcels:

- Low levels of PCP and TCP were detected in soil in the anti-stain area. Additional assessment may be appropriate depending upon future land use.
- CH2M Hill observed oil stained soil at an oil dispenser where transformers had also been stored, in front of the maintenance shop, and at the southeast corner of the boiler building. Soil samples should be collected to determine the extent of contamination.
- In 1987 LP removed three USTs in the western portion of the site, but no samples were collected. Sampling is recommended in the vicinity of the former USTs to determine whether a release had occurred.
- CH2M Hill identified a 1985 memorandum prepared by LP that indicated cooling water and boiler blow-down water were discharged to a percolation sump and that the boiler water had been treated with nitrite and aliphatic amines. CH2M Hill noted in its report that sodium hydroxide and components listed only as non-hazardous are known to have been present in products used for boiler water treatment. CH2M Hill recommended that the location of the subsurface discharge should be located and soil samples analyzed to determine if contamination is present.
- An undetermined number of ASTs were present at the site and little is known about what they contained. Although no staining was evident during the site visit by CH2M Hill, they recommended sampling in the vicinity of the former ASTs.

During the 2002 supplemental site investigation performed by Geocon, soil and groundwater samples were collected to assess the presence of contamination in the former UST location, sawmill/lumber sorter/anti-stain area, dry kiln/boiler blow-down sump, transformer/oil dispensing unit, wood waste disposal area, maintenance shop trench drain outfall, dry kiln fuel shed drain outfall, and dry kiln/possible fueling area. During the 2002 supplemental site investigation, borings were located to assess most of the areas identified in the 1991 property transfer site assessment.

E & E identified issues of concern in addition to those identified in the previous assessments. Additional potential issues of concern identified during this assessment are the unknown disposition of a fourth UST, the known presence of ash from the teepee burner and boilers on former mill roadways, the presence of used oil on former roadways from past use for dust suppression, and the potential presence of compounds typically associated with lumber mills in stockpiles of wood waste and soil at the site.

7 Conclusions

7.1 Recognized Environmental Conditions

The goal of the ASTM standard is to identify RECs, which the ASTM standard defines as: "The term recognized environmental condition means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to a release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions." No environmental issues have been considered in this assessment that are outside the scope of CERCLA and petroleum products.

Except for the following, this assessment has revealed no RECs in relation to the subject site:

- The documented presence of PCP in soil near the anti-stain application area indicates a release of the anti-stain agent containing PCP has occurred;
- The presence in 1991 of discolored soil in front of the maintenance shop and at the southeast corner of the boiler building;
- The documented historical practice of disposing of boiler and incinerator ash by spreading on mill roadways and along with wood waste; and
- The presence of stockpiles of wood waste at the site that were moved from the wood waste disposal area.

7.2 De Minimis Conditions

According to the ASTM standard, the term REC is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate government agencies. Conditions determined to be de minimis are not RECs.

Except for the following, this assessment has revealed no de minimis conditions in relation to the subject site:

- The observed presence in 1991 of oil-soaked sawdust on the floor of the oil shed, which had a perimeter containment berm and no observed release from the containment;
- The documented presence of TPHmo in 2002 at the discharge point for a trench drain at the maintenance shop; and
- The historical practice of spreading used oil on mill roads for dust suppression.

7.3 Historical Recognized Environmental Conditions

According to the ASTM standard, the term historical REC is an environmental condition which in the past would have been considered a REC, but which may or may not be considered a REC currently. This assessment has revealed no historical RECs identified in relation to the site.

7.4 Controlled Recognized Environmental Conditions

According to the ASTM standard, the term controlled REC is a REC resulting from a past release that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substance or petroleum allowed to remain in place subject to the implementation of required controls such as land use restrictions, activity and use restrictions, institutional controls, or engineering controls. This assessment has revealed no controlled RECs identified in relation to the site.

8 Opinion

This section is included as described in the ASTM standard, Section 11.6. The opinions provided here are based solely on the information presented in this report. Results of this assessment indicate that there are four RECs in connection with the site. Issues identified as RECs are known to have caused impacts or pose significant potential to have caused impacts at the site.

The documented presence of PCP in soil at concentrations up to 3 mg/kg, exceeding the November 2013 industrial RSL for PCP of 2.7 mg/kg, indicates that a release of anti-stain agent has occurred. Soil and groundwater samples were collected by Geocon in 2002 from two borings that reportedly targeted the anti-stain application area where PCP was previously detected. The closest of the two borings that Geocon sampled in relation to the anti-stain application area is located approximately 75 feet north northeast (up-gradient to cross-gradient) from the anti-stain application area. Due to the up-gradient to cross-gradient location and distance from the anti-stain application area, the data collected by Geocon are not reliable for assessing the presence of PCP in the anti-stain application area. The documented release of anti-stain agent is a REC that should be assessed to evaluate the extent and concentrations of contamination in soil that may be encountered during redevelopment.

The documented presence of discolored soil in front of the maintenance shop and at the southeast corner of the boiler building indicates that a release (most likely oil) has occurred at those locations. No information was collected during this assessment to indicate that any cleanup was conducted in the discolored areas. Discolored soil was not observed during the April 10, 2014 site visit. Because extensive surface soil disturbance is common when structures are demolished, the staining is most likely now hidden, but could also have degraded naturally. The past presence of discolored soil is considered a REC that should be assessed to determine the absence or presence of contamination in soil that may be encountered during redevelopment.

The documented practice of disposing of boiler and incinerator ash by spreading on mill roadways and along with wood waste indicates the presence of a release of ash. The presence of boiler and incinerator ash on mill roadways is a REC that should be assessed to determine the absence or presence of contamination.

The presence of stockpiles of wood waste on the site that were moved from the wood waste disposal area indicates the likely presence of incinerator ash and PCP in the stockpiled material. Ash from the boilers and from a teepee burner, located north of the subject site is known to have been disposed along with wood waste. Lumber at the site is known to have been treated with PCP as an anti-stain agent and is contained in wood waste generated by the planer, which is known to have been disposed in the off-site wood waste disposal area then later brought back to subject site and placed in stockpiles. The presence of wood waste in stockpiles that likely contain incinerator and boiler ash as well as PCP is a REC that should be assessed to determine the absence or presence of contamination.

8-1

As part of the 1991 property transfer site assessment, oil-soaked sawdust was observed on the floor of the oil shed. The oil shed had a secondary containment berm and no evidence was observed to indicate that oil had been released to the environment. The past presence of oil on the floor of the oil shed is considered a de minimis condition because none of the records reviewed nor any observations made during this assessment suggest that oil reached the environment.

As part of the 2002 supplemental site investigation, TPHmo was detected at a concentration of 550 mg/kg at a depth of 0.15 meter at the discharge point of a trench drain in the maintenance shop. The reported concentration of TPHmo exceeds its ESL of 500 mg/kg. Even though the presence of TPHmo indicates that a release has occurred, it is considered a de minimis condition because the detected concentration barely exceeds the ESL, contamination was not detectable at the 1 meter sampling depth, and soil contamination has not caused detectable groundwater contamination.

The documented historic practice of spreading used oil on mill roads for dust suppression indicates the presence of used oil on former road surfaces. Most of the site was paved with asphalt when LP expanded the facility in the middle of the 1970s so there has been no need for dust suppression since then. The historical practice of spreading used oil on roadways is known to have been ubiquitous and is not known to have caused significant contamination. Most of the oil used for dust suppression has likely degraded over time; oil is not very mobile in the environment and is restricted to a very thin lens, therefore it is considered a de minimis condition.

The lack of information to confirm the current presence or absence of a fourth UST at the site is considered a significant data gap. The historical presence of a fourth UST at the site is documented in the Property Transfer Site Assessment Report (CH2M Hill 1991), which indicates "A single tank remains onsite near the maintenance shop. This tank was removed from the LP Greenville facility." None of the records reviewed as part of this assessment indicate a fourth UST was registered at the facility, what it contained, its size, or that it was removed. None of the individuals interviewed is aware of any additional information regarding the fourth UST. The brief description of the fourth UST and the fact that it was not identified as a concern in the Property Transfer Site Assessment suggests that the UST may simply have been empty and stored at the surface. The location of the UST near the maintenance shop and the lack of any description of contents or size suggest the UST may have still remained in place during the site visit by CH2M Hill and may remain so today. In the absence of information to confirm the presence or absence of the fourth UST, E & E cannot determine whether it should be considered a REC. Except for the possible presence of one UST at the site there were no data gaps in this assessment that are considered to be significant. As a result of this data gap, it is possible that additional RECs are present, but cannot be identified.

The presence of contamination in relation to the boiler water disposal sump, USTs, ASTs, and oil dispenser/transformer storage area was assessed in the Supplemental Site Investigation Report (Geocon 2002b). The documented absence of significant contamination in relation to the boiler water disposal sump, USTs, ASTs, and oil dispenser/transformer storage area indicates that no further assessment should be necessary in these areas.

9 Limitations

9.1 Special Terms and Conditions

To achieve the study objectives stated in this report, conclusions are based on the best information available during the period of the investigation and within the scope of services prescribed in the agreement.

Professional judgment was exercised in gathering and analyzing the information obtained, and we commit ourselves to the usual care, thoroughness, and competence being practiced in the engineering profession at the time of this work. No investigative method can completely eliminate the possibility of obtaining partially imprecise or incomplete information. Thus, E & E cannot guarantee that the investigations completely defined the potential for any contamination by hazardous or otherwise harmful substances described in the report or, if no such contamination is found, its absolute absence.

This report is not a legal opinion. This report does not necessarily comply with requirements defined in any environmental law such as the "innocent landowner defense" or "due diligence inquiry." Only legal counsel retained by the user is competent to determine the legal implications of any information or conclusions in this report for the user.

E & E is not responsible for any effect upon the legal rights, obligations, or liabilities of any party or for any effect on the finance-ability, marketability, or value of the property investigated in the study or for the occurrence or non-occurrence of any transaction involving the property.

This report was prepared for the exclusive use of the U.S. EPA and the SICE. E & E is not liable for any action arising out of the reliance of any third party on the information contained within this report.

9.2 Significant Assumptions

A number of assumptions have been made in the preparation of this assessment, consistent with the standard of care generally practiced by similar professionals in the environmental assessment industry at the time the work is performed. We have not attempted to list all of our assumptions or determine whether those assumptions are significant because no level of effort can fully document the assumptions made during the normal course of professional judgment exercised in the preparation of this type of assessment. No special assumptions have been made that are deemed pertinent to the findings of this assessment.

9.3 Deviations

This assessment was conducted in general conformance with the ASTM standard. There were no deviations from the ASTM standard during the performance of this assessment that are considered pertinent to the findings of this assessment.

9.4 Data Gaps

According to the ASTM standard, "The report shall identify and comment on significant data gaps that affect the ability of the environmental professional to identify recognized environmental conditions and identify the sources of information that were consulted to address the data gaps." The lack of information to confirm the current presence or absence of a fourth UST at the site is considered a significant data gap. In the absence of information to confirm the presence or absence of the fourth UST, E & E cannot determine whether it should be considered a REC. Except for the possible presence of one UST at the site there were no data gaps in this assessment that are considered to be significant. As a result of this data gap, it is possible that additional RECs are present, but cannot be identified.

9.5 Out of Scope Issues

Information regarding contaminants and issues that are outside the scope of this assessment may be of concern to landowners and may be provided herein at the request of or for the general information of the user. The most common of these constituents and issues that may be of concern include, but are not limited to, the following:

- Radon:
- Naturally occurring asbestiform minerals;
- Asbestiform minerals in construction materials;
- Lead based paint;
- Naturally occurring lead in drinking water;
- Wetlands delineation;
- Regulatory compliance;
- Cultural and historical resources;
- Health and safety;
- Ecological resources;
- Indoor air quality;
- Biological agents;
- Mold;
- Geologic hazards; and
- Geotechnical conditions.

Inclusion of information regarding any of these issues in this report is for informational purposes only. As a result, any information provided herein regarding any issues that are outside the scope of CERCLA or petroleum does not provide the user with any legal protection from liability for costs related to assessment, abatement, or otherwise addressing these issues.

10 Qualifications of Environmental Professionals

This Phase I Environmental Site Assessment was conducted by E & E's environmental professionals duly registered by the California Board for Professional Engineers, Land Surveyors, and Geologists.

I, Paul Jones, declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 Code of Federal Regulations (CFR) Part 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I developed and performed all appropriate inquiries in general conformance with the standards and practices set forth in 40 CFR Part 312.

Paul E. Jones, START Geologist, P.G. #7352

Building 4 Condition:

OWNERSHIP HISTORY AND STATUS

- 1) Are you the property owner? No
- a. If not, do you have legal permission to enter the property to conduct the site assessment activities? (Applicant must obtain access to property for EPA contractor to conduct a Phase II TBA) Yes
- b. Is there known contamination on the property? Unknown
 - c. Did you cause the contamination?

No

- d. Are you affiliated with the person who caused the contamination?
- 2) When was the property acquired? 07/2003
- 3) How was the property acquired? Purchased

List chronological history of site business #1 LP Sawmill, Sacrament Molding Company (1980s), Purchased by Mr. Lehman 2003.
Currently the site is vacant.

List chronological history of site business #2 (if applicable) N/A

List chronological history of site business #3 (if applicable) N/A

List chronological history of site business #4 (if applicable) N/A
Are petroleum, drug lab, or mining wastes known to be present at the site?
No

If 'yes', please describe.

N/A

SITE REDEVELOPMENT

What is the anticipated use for the site? The anticipated use is to develop a woodchip processing facility where in-woods chipped material could be refined through a process of screen and regrinding and then air dried to create a woodchip that is uniform in size and less than 30% moisture content. This facility will process approximately 4,000 tons of raw material into 2,000 "bone dry" tons of conditioned chips.

Is there funding in place or anticipated for redevelopment? Yes

If 'yes', does that include cleanup? No If 'yes', how will redevelopment be funded? Through a series of rural business grants, woody biomass utilization grants and donated funds for site Page 2 TBA App Crescent Mills Lumber Mill.txt

acquisition.

Are tax or other financial incentives available for this project?

Is the applicant or any other party under order from EPA, state, or local agency to conduct a site assessment or clean-up?

If yes, briefly describe any involvement by state or local agencies in enforcement and/or oversight of assessments or cleanup of the site.

Briefly describe the conclusions from any previous site assessment activities, or simply paste conclusion sections of reports. Identify client, consultant, and approximate dates of past studies. Some work was done on the site in 1987 when Sacramento Molding purchased the site. It is believed that gas tanks and polluted soil were removed from the site.

Briefly describe public interest and/or community involvement in site reuse planning activities to date. There is strong public support for this project. Biomass utilization is a high priority for this region of California given the risk of catastrophic wildfire and need to improve forest health and structure. Additionally, heating costs at critical public institutions (school, hospitals, and county facilities) are great considering this region's lack of access to natural gas. Finally, the opportunity develop a biomass processing facility will help stimulate the local economy and provide 2-3 new jobs to the rural community.

HISTORIC

Briefly describe the known historic characteristics of the site (e.g. is the site on/eligible for the National Register of Historic Places?). There are no known historic considerations.

Are structures on the site older than 50 years?

Is the site on soil that has been previously disturbed? Yes

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 02/03/2014 has revealed that there is 1 ENVIROSTOR site within approximately 1.25 miles of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Number of Days to Update: 78 Next Scheduled EDR Contact: 04/21/2014
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary

and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Most Recent Revision: 1994

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

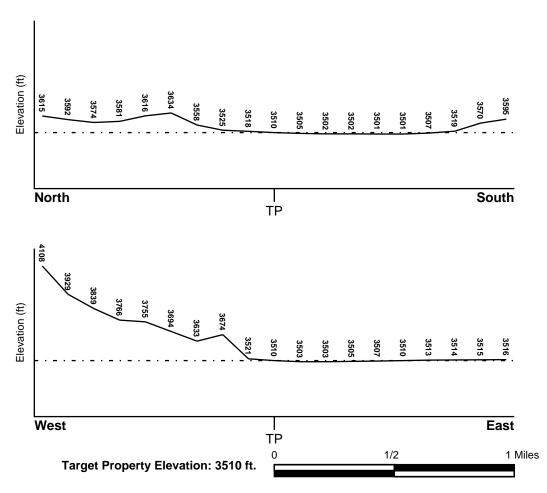

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

 GROUNDWATER FLOW

 Not Reported
 TOTAL T

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Plumas Variant

Soil Surface Texture:

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class: Well drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classi	fication	Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		Soil Reaction (pH)
1	0 inches	20 inches		Not reported	Not reported	Max: 14 Min: 4	Max: 7 Min: 6.1
2	20 inches	29 inches		Not reported	Not reported	Max: 14 Min: 4	Max: 6.5 Min: 6.1
3	29 inches	59 inches		Not reported	Not reported	Max: 14 Min: 4	Max: 6.5 Min: 6.1

Soil Map ID: 2

Soil Component Name: Greenhorn

Soil Surface Texture:

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 64 inches

	Soil Layer Information						
Boundary			Classification		Saturated hydraulic		
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		Soil Reaction (pH)
1	20 inches	59 inches		Not reported	Not reported	Max: 14 Min: 4	Max: 7 Min: 6.1
2	0 inches	20 inches		Not reported	Not reported	Max: 42 Min: 14	Max: 7 Min: 6.1

Soil Map ID: 3

Soil Component Name: Holland family

Soil Surface Texture: weathered bedrock

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class: Well drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

	Soil Layer Information						
	Bou	ndary		Classification		Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		Soil Reaction (pH)
1	59 inches	63 inches	weathered bedrock	Not reported	Not reported	Max: 1.4 Min: 0	Max: Min:
2	9 inches	40 inches	clay loam	Not reported	Not reported	Max: 14 Min: 4	Max: 7 Min: 6.5

	Soil Layer Information						
Boundary				Classif	Classification		
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	hydraulic conductivity micro m/sec	Oon itcachon
3	0 inches	9 inches	gravelly loam	Not reported	Not reported	Max: 14 Min: 4	Max: 7 Min: 6.5
4	40 inches	59 inches	clay	Not reported	Not reported	Max: 4 Min: 1.4	Max: 7 Min: 6.6

Soil Map ID: 4

Soil Component Name: Gansner

Soil Surface Texture:

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Poorly drained

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 76 inches

			Soil Layer	Information			
Boundary				Classification		Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	25 inches	59 inches		Not reported	Not reported	Max: 4 Min: 1.4	Max: 7.8 Min: 6.6

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map. USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR Site Report™

TABLE OF CONTENTS

The EDR-Site Report[™] is a comprehensive presentation of government filings on a facility identified in a search of federal, state and local environmental databases. The report is divided into three sections:

Sectio	n 1: Facility Summary
	Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.
Sectio	n 2: Facility Detail Reports
	All available detailed information from databases where sites are identified.
Sectio	n 3: Databases and Update Information
	Name, source, update dates, contact phone number and description of each of the databases for this report.

Thank you for your business.Please contact EDR at 1-800-352-0050 with any questions or comments.

DATABASES FOUND IN THIS REPORT

CA HAZNET: Facility and Manifest Data Source: California Environmental Protection Agency Telephone: 916-255-1136

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

DATABASES FOUND IN THIS REPORT

CA HAZNET: Facility and Manifest Data Source: California Environmental Protection Agency Telephone: 916-255-1136

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

SECTION 1: FACILITY SUMMARY

FACILITY	FACILITY 1 LOUISIANA PACIFIC CORP HWY 89 CRESCENT MILLS, CA 95934 EDR ID #S112903107
WASTE MANAGEMENT Facility generates hazardous waste (RCRA)	NO
Facility treats, stores, or disposes of hazardous waste on-site (RCRA/TSDF)	NO
Facility has received Notices of Violations (RCRA/VIOL)	NO
Facility has been subject to RCRA administrative actions (RAATS)	NO
Facility has been subject to corrective actions (CORRACTS)	NO
Facility handles PCBs (PADS)	NO
Facility uses radioactive materials (MLTS)	NO
Facility manages registered aboveground storage tanks (AST)	NO
Facility manages registered underground storage tanks (UST)	NO
Facility has reported leaking underground storage tank incidents (LUST)	NO
Facility has reported emergency releases to the soil (ERNS)	NO
Facility has reported hazardous material incidents to DOT (HMIRS)	NO
WASTE DISPOSAL Facility is a Superfund Site (NPL)	NO
Facility has a known or suspect abandoned, inactive or uncontrolled hazardous waste site (CERCLIS)	NO
Facility has a reported Superfund Lien on it (LIENS)	NO
Facility is listed as a state hazardous waste site (SHWS)	NO
Facility has disposed of solid waste on-site (SWF/LF)	NO
MULTIMEDIA Facility uses toxic chemicals and has notified EPA under SARA Title III, Section 313 (TRIS)	NO
Facility produces pesticides and has notified EPA under Section 7 of FIFRA (SSTS)	NO
Facility manufactures or imports toxic chemicals on the TSCA list (TSCA)	NO
Facility has inspections under FIFRA, TSCA or EPCRA (FTTS)	NO
Facility is listed in EPA's index system (FINDS)	NO
Facility is listed in other database records (OTHER)	YES - p4
POTENTIAL SUPERFUND LIABILITY Facility has a list of potentially responsible parties PRP	NO
TOTAL (YES)	1

SECTION 3: DATABASES AND UPDATE DATES

To maintain currency of the following federal, state and local databases, EDR contacts the appropriate government agency on a monthly or quarterly basis as required.

Elapsed ASTM days: Provides confirmation that this report meets or exceeds the 90-day updating requirement of the ASTM standard.

DATABASES FOUND IN THIS REPORT

CA HAZNET: Facility and Manifest Data Source: California Environmental Protection Agency Telephone: 916-255-1136

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

Date of Government Version: 12/31/2012 Date of Last EDR Contact: 01/17/2014 Database Release Frequency: Annually Date of Next Scheduled Update: 04/28/2014 Inquiry Number: March 27, 2014

EDR Site Report™

TABLE OF CONTENTS

The EDR-Site Report[™] is a comprehensive presentation of government filings on a facility identified in a search of federal, state and local environmental databases. The report is divided into three sections:

Sectio	n 1: Facility Summary
	Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.
Sectio	n 2: Facility Detail Reports
	All available detailed information from databases where sites are identified.
Sectio	n 3: Databases and Update Information
	Name, source, update dates, contact phone number and description of each of the databases for this report.

Thank you for your business. Please contact EDR at 1-800-352-0050 with any questions or comments.

Elapsed ASTM days: Provides confirmation that this report meets or exceeds the 90-day updating requirement of the ASTM standard.

DATABASES FOUND IN THIS REPORT

CA HAZNET: Facility and Manifest Data Source: California Environmental Protection Agency Telephone: 916-255-1136

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR Site Report™

TABLE OF CONTENTS

The EDR-Site Report[™] is a comprehensive presentation of government filings on a facility identified in a search of federal, state and local environmental databases. The report is divided into three sections:

Section	n 1: Facility Summary
;	Summary of facility filings including a review of the following areas: waste management, waste disposal, multi-media issues, and Superfund liability.
Section	n 2: Facility Detail Reports
,	All available detailed information from databases where sites are identified.
Section	n 3: Databases and Update Information
	Name, source, update dates, contact phone number and description of each of the databases for this report.

Thank you for your business. Please contact EDR at 1-800-352-0050 with any questions or comments.

Disclaimer - Copyright and Trademark Notice

SECTION 1: FACILITY SUMMARY

FACILITY	FACILITY 1 SERVICE STATION BOX 77 HIGHWAY 89 CRESCENT MILLS, CA 95934 EDR ID #S106932036
WASTE MANAGEMENT Facility generates hazardous waste (RCRA)	NO
Facility treats, stores, or disposes of hazardous waste on-site (RCRA/TSDF)	NO
Facility has received Notices of Violations (RCRA/VIOL)	NO
Facility has been subject to RCRA administrative actions (RAATS)	NO
Facility has been subject to corrective actions (CORRACTS)	NO
Facility handles PCBs (PADS)	NO
Facility uses radioactive materials (MLTS)	NO
Facility manages registered aboveground storage tanks (AST)	NO
Facility manages registered underground storage tanks (UST)	NO
Facility has reported leaking underground storage tank incidents (LUST)	NO
Facility has reported emergency releases to the soil (ERNS)	NO
Facility has reported hazardous material incidents to DOT (HMIRS)	NO
WASTE DISPOSAL Facility is a Superfund Site (NPL)	NO
Facility has a known or suspect abandoned, inactive or uncontrolled hazardous waste site (CERCLIS)	NO
Facility has a reported Superfund Lien on it (LIENS)	NO
Facility is listed as a state hazardous waste site (SHWS)	NO
Facility has disposed of solid waste on-site (SWF/LF)	NO
MULTIMEDIA Facility uses toxic chemicals and has notified EPA under SARA Title III, Section 313 (TRIS)	NO
Facility produces pesticides and has notified EPA under Section 7 of FIFRA (SSTS)	NO
Facility manufactures or imports toxic chemicals on the TSCA list (TSCA)	NO
Facility has inspections under FIFRA, TSCA or EPCRA (FTTS)	NO
Facility is listed in EPA's index system (FINDS)	NO
Facility is listed in other database records (OTHER)	YES - p4
POTENTIAL SUPERFUND LIABILITY Facility has a list of potentially responsible parties PRP	NO
TOTAL (YES)	1

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available city directory data at 5 year intervals.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Site Name: Client Name:

Former LP Lumber Mill Ecology and Environment, Inc. 15690 Highway 89 130 Battery Street

Crescent Mills, CA 95934 San Francisco, CA 94111

EDR Inquiry # 3892192.3 Contact: Paul Jones

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Ecology and Environment, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

The EDR Aerial Photo Decade Package

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.

I Land Title Records

Former LP Lumber Mill

15690 Highway 89 Crescent Mills, CA 95934

Inquiry Number: 3892192.7S

April 03, 2014

The EDR Environmental LienSearch™

The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- · access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050 with any questions or comments.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

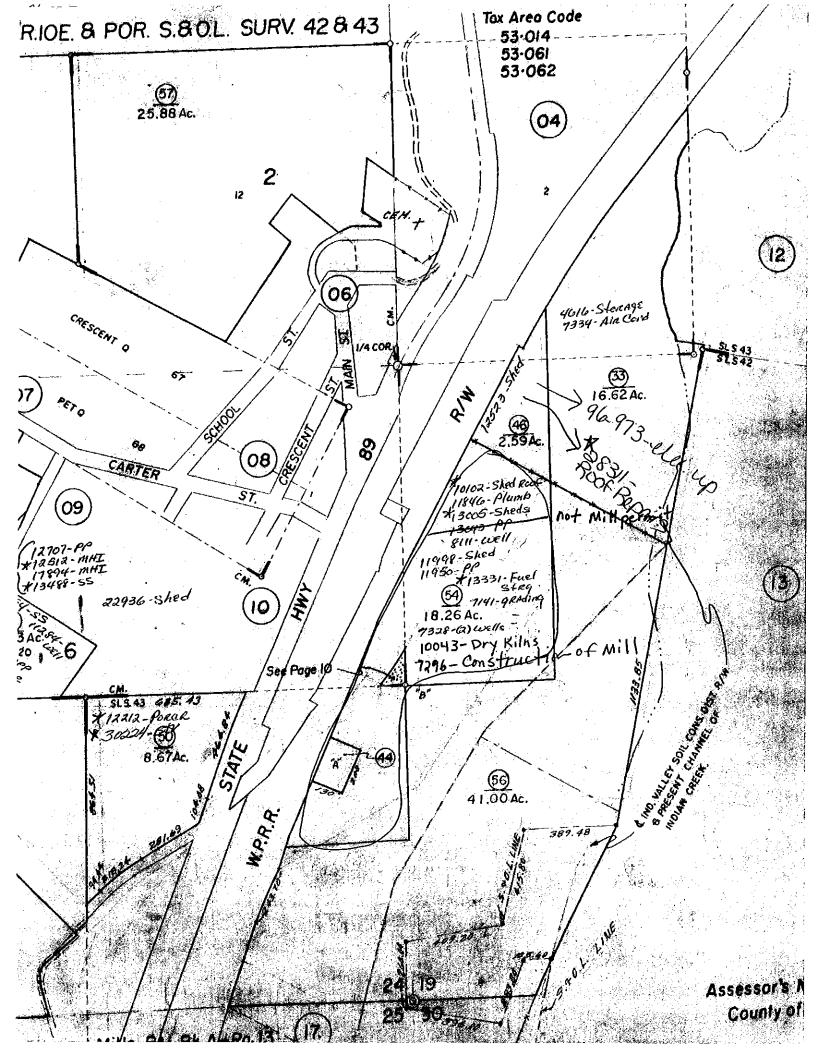

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

Mr. Coy Block Plumas County Courthouse Quincy, California 95971

Dear Mr. Block:

Attached, please find Percolation Test results along with Septic Tenk and Drain Field Calculations. These supplement sheets 3 & 4 of 15, prepared by our office and submitted to you as requested to obtain a building permit for the new: Louisiana Pacific Mill at Creacent Mills. All Percolation Tests were taken in the area proposed for the drain field. A cross sectional detail of the proposed drain field is also included.

If you need any additional information please contact our office at your convenience.

Vory truly yours,

COOK ASSOCIATES

M User and Transaction Screen Questionnaires

X3. USER OUESTIONNAIRE

INTRODUCTION

In order to qualify for one of the Landowner Liability Protections (LLPs)35 offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"),36 the user must provide the following information (if available) to the environmental professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

(1.) Environmental cleanup liens that are filled or recorded against the site (40 CFR 312.25). Are you aware of any environmental cleanup liens egainst the property that are filled or recorded under lederal, tribal, state or local law?

(2.) Activity and land use limitations that are in place on the site or that have been filed or recorded in a registry (40 CFR 312.26). Are you aware of any AULs, such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filled or recorded In a registry under federal, tribal, state or local law?

(3.) Specialized knowledge or experience of the person steking to qualify for the LLP (40 CFR 312.28). As the user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

(4.) Relationship of the purchase price to the fair market value of the property if it were not conteminated (40 CFR 312.29). Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contemination is known or believed to be present at the property?

(6.) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30). Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user,

(a.) Do you know the past uses of the *property?*(b.) Do you know of specific chemicals that are present or once were present at the *property*?

(c.) Do you know of spills or other chemical releases that have taken place at the property?

(d.) Do you know of any environmental cleanups that have taken place at the property?

(6.) The degree of obviousness of the presence of likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31).

As the user of this ESA, based on your knowledge and experience related to the property ere there any obvious indicators that point to the presence or likely pres-

ence of contemination at the property?

X3.1 In addition, certain information should be collected, if available, and provided to the environmental professional selected to conduct the Phase I. This information is intended to assist the environmental professional but is not necessarily required to qualify for one of the LLPs. The information includes:

- (a) the reason why the Phase I is required,
- (b) the type of property and type of property transaction, for example, sale, purchase, exchange, etc.,

(c) the complete and correct address for the property (a map or other documentation showing property location and boundaries is helpful),

(d) the scope of services desired for the Phase I (including whether any parties to the property transaction may have a required standard scope of services on whether any considerations beyond the requirements of Practice E 1527 are to be considered),

(e) identification of all parties who will rely on the Phase I report,

²⁵ Landowner Liability Protections, or LLPs, is the term used to describe the three types of potential defenses to Superfund hability in EPA's Interim Guidance Regarding Criteria Landawners Must Meet in Order to Qualify for Bona Fide Prospective Purchuser, Contiguous Property Owner, or Innocent Landowner Limitations on CERCLA Liability ("Common Elements" Guide) issued on March 6, 2003. 36 P.L. 107-118.

user must determine, in the exercise of the user's reasonable business judgment, the scope of such further inquiry.

- 5.8 Further Inquiry—Upon completing the transaction screen questionnaire, if the user concludes that further inquiry or action is needed (for example, consult with an environmental consultant, contractor, governmental authority, or perform additional governmental and/or historical records review), the user should proceed with such inquiry. (Note that if the user determines to proceed with a Phase I Environment Site Assessment, the user may apply the current Practice E 1527 or alternatively the provisions of EPA's regulation "Standards and Practices for All Appropriate Inquiries," 40 C.F.R. Part 312.)
- 5.9 Signature—The user and the preparer of the transaction screen questionnaire must complete and sign the questionnaire as provided at the end of the questionnaire.

6. Transaction Screen Questionnaire

6.1 Persons to Be Questioned—The following questions should be asked of (1) the current owner of the property, (2)

any major occupant of the property or, if the property does not have any major occupants, at least 10 % of the occupants of the property, and (3) in addition to the current owner and the occupants identified in (2), any occupant likely to be using, treating, generating, storing, or disposing of hazardous substances or petroleum products on or from the property. A major occupant is any occupant using at least 40 % of the leasable area of the property or any anchor tenant when the property is a shopping center. In a multifamily property containing both residential and commercial uses, the preparer does not need to ask questions of the residential occupants. The preparer should ask each person to answer all questions to the best of the respondent's actual knowledge and in good faith. When completing the site visit column, the preparer should be sure to observe the property and any buildings and other structures on the property. The guide to this transaction screen questionnaire (see Sections 7-10) provides further details on the appropriate use of this questionnaire. (See Note 2.)

Note 2-Unk = "unknown" or "no response."

user must determine, in the exercise of the user's reasonable business judgment, the scope of such further inquiry.

5.8 Further Inquiry—Upon completing the transaction screen questionnaire, if the user concludes that further inquiry or action is needed (for example, consult with an environmental consultant, contractor, governmental authority, or perform additional governmental and/or historical records review), the user should proceed with such inquiry. (Note that if the user determines to proceed with a Phase I Environment Site Assessment, the user may apply the current Practice E 1527 or alternatively the provisions of EPA's regulation "Standards and Practices for All Appropriate Inquiries," 40 C.F.R. Part 312.)

5.9 Signature—The user and the preparer of the transaction screen questionnaire must complete and sign the questionnaire as provided at the end of the questionnaire.

6. Transaction Screen Questionnaire

6.1 Persons to Be Questioned—The following questions should be asked of (1) the current owner of the property. (2)

any major occupant of the property or, if the property does not have any major occupants, at least 10 % of the occupants of the property, and (3) in addition to the current owner and the occupants identified in (2), any occupant likely to be using, treating, generating, storing, or disposing of hazardous substances or petroleum products on or from the property. A major occupant is any occupant using at least 40 % of the leasable area of the property or any anchor tenant when the property is a shopping center. In a multifamily property containing both residential and commercial uses, the preparer does not need to ask questions of the residential occupants. The preparer should ask each person to answer all questions to the best of the respondent's actual knowledge and in good faith. When completing the site visit column, the preparer should be sure to observe the property and any buildings and other structures on the property. The guide to this transaction screen questionnaire (see Sections 7-10) provides further details on the appropriate use of this questionnaire. (See Note 2.)

Note 2-Unk = "unknown" or "no response."
